

# **They present a guide to standardize measurements and reports of Scope 3 emissions in the copper mining value chain**

HubSustainability.

Pulso. January 18, 2025

The Scope 3 Emissions Traceability Board, composed of Anglo American, Antofagasta Minerals, BHP, Codelco, Freeport-McMoRan, Glencore, Lundin, Teck, and coordinated by Alta Ley, has presented a methodological guide for measuring and reporting emissions in the copper value chain. This document adapts international measurement protocols, providing technical recommendations tailored to the operational realities of the sector.

Currently, emissions from the mining value chain account for more than 50% of the industry's total carbon footprint, making them a key aspect of the challenge to achieve carbon neutrality.

This technical document will facilitate the management of these emissions and improve their measurement. By standardizing processes, it enables the establishment of targets and the evaluation of implemented measures.
